

WEEKLY STUDENT INTERNSHIP JOURNAL

STUDENT INTERN: John Rod Mhar M. Suario	PROGRAM: BSIT
DATE: February 19-25, 2026	

WEEK 6

ACCOMPLISHMENT	DIFFICULTIES ENCOUNTERED	NEW LEARNING/ INSIGHTS
Zoey AI Agent Development - Completed the development of Zoey, an AI agent that integrates with the JmFitnessPal system. - Enabled meal logging functionality without requiring manual login to the JmFitnessPal system. - Utilized LibreChat AI for seamless communication and data logging. - Conducted thorough testing to ensure Zoey accurately logs meals. Memory Agent Creation - Assigned to develop a memory agent to store, update, and delete data dynamically. - Conducted initial research and planning for the memory agent's structure. - Started exploring how to implement the CRUD (Create, Read, Update, Delete) operations for efficient data management.	This week, I completed the development of Zoey, an AI agent integrated with the JmFitnessPal system. The main achievement was enabling Zoey to log meals without needing to manually log in to the system. By leveraging LibreChat AI, I created a seamless experience where meals can be logged directly through the AI interface. After completing Zoey's development, I conducted thorough testing to ensure that the meal logging functionality was accurate and reliable. In addition, I was assigned to create a memory agent to allow for efficient data storage, updating, and deletion. I began researching the best methods for implementing this agent, focusing on the structure and how it would handle CRUD (Create, Read, Update, Delete) operations. This task is an exciting new challenge and will involve creating a dynamic system capable of managing data effectively. I also encountered some challenges during the integration of Zoey with JmFitnessPal, specifically with fine-tuning the system's interactions and optimizing API response times. Additionally, there were issues with natural language processing when interpreting meal descriptions, which required adjustments to improve accuracy. These challenges provided valuable learning experiences in troubleshooting and system optimization.	This week, I successfully completed the development of Zoey, an AI agent integrated with the JmFitnessPal system. The main achievement was enabling Zoey to log meals without the need to manually log into the system. By utilizing LibreChat AI, I created a smooth experience for logging meals directly through the AI interface, streamlining the process for users. After development, I conducted extensive testing to ensure that Zoey accurately logged meals and operated as intended. In addition to Zoey's completion, I was tasked with developing a memory agent designed to store, update, and delete data efficiently. I began researching the structure and functionality of this memory agent, focusing on how it would handle CRUD (Create, Read, Update, Delete) operations. This new task presents an exciting challenge, and I am eager to explore the implementation of a dynamic data management system. I also encountered some difficulties during the integration of Zoey with JmFitnessPal. Fine-tuning the system's interactions and optimizing API response times proved to be a challenge, and I had to address natural language processing issues to better interpret meal descriptions. These challenges provided valuable learning experiences, allowing me to improve my troubleshooting and system optimization skills.

STUDENT-TRAINEE	HTE SUPERVISOR
JOHN ROD MHAR M. SUARIO (signature over printed name)	 MARLITO DUNOG (signature over printed name)

Republic of the Philippines
Pamantasan ng Cabuyao
(University of Cabuyao)
Academic Affairs Division

Katapatan Mutual Homes, Brgy. Banay-banay, City of Cabuyao, Laguna 4025

☐ I agree to the collection and processing of my data for the purpose of facilitating my internship of Pamantasan ng Cabuyao. I understand that my personal information is protected by RA 10173, Data Privacy Act of 2012, and that I am required to provide truthful information.
